Complete Data Protection from BSoft Online Backup and Recovery

Protecting your critical data has never been easier. Our automated cloud backup and recovery services will boost your productivity and reduce your time spent managing data loss.

Most businesses collect, retain, and transmit data on a daily basis that is critical to the success of their organization. The threat of data theft, natural disasters and hardware failures can result in a hard hit to a business' bottom line, costing days of downtime, thousands of dollars and irreversible damage to a business' reputation.

Covers All Your Data Types

Files and Folders

Recover from the accidental deletion of any document, spreadsheet, or folder.

Exchange, SQL and System State

Enable backup and recovery of Exchange, SQL data, and System State.

VMware images

Restore full VM images from the cloud back to your host or our site.

Our online backup is highly secure and reliable and scales to meet your business' unique needs.

Ease of Use

Quick Start

Set up is fast. And if you have a lot of data to backup initially, we can provide seeding services without tying up available bandwidth.

Automatic Backups

We can schedule your backups to happen whenever you want, as frequently as you want.

Manage Local and Offsite Backups

Our flexible solution allows for any of your data to be stored online and/or saved to local storage, eliminating the need for a separate local-only backup solution.

Security

Military-grade encryption

Files are secured using 256-bit AES encryption and a private encryption key. SSL technology is used in data transmission. Your data is protected both onsite and over the Internet.

Off-site Storage

Data is stored in two, SSAE 16 Type II compliant datacenters with redundant storage and biometric security.

> 43% of companys experiencing disasters never reopen., 29% close within two years.
> - McGladrey and Pullen

> The average cost of a single incident of data loss is $10,000.
> - Gartner

> SMBs experience a median of 6 outages per calendar year.
> - Symantec

Robust, Flexible Archiving

Data-archiving settings allows historical data to be saved as long as you need and meet applicable compliance standards.

Business Grade

Multiple Revisions

Store an unlimited number of versions of the same file so there's no fear of accidental deletion or overwriting a file.

Reporting and Notifications

We can send you notifications that your backups have completed successfully, including detailed statistics.

Multiple Device Support

Our solutions lets you back up a single computer or server, multiple computers, laptops or even multiple offices.
